## **AMENDMENT TO CLAIMS**

1. (canceled)
2. (canceled)
3. (currently amended) A prosthetic heart valve having an inside and an outside and
comprising:
a polymeric valve body having at least one leastlet, said leastlet having an open position
and a closed position,
a stent coupled to said valve body, said stent having a plurality of apertures, said
apertures providing openings between the outside of the prosthetic heart valve and the inside of
the prosthetic heart valve and said apertures being capable of receiving sewing ring fasteners,
wherein said stent comprises a circumferential base and the apertures penetrate said base,
wherein at least a portion of the stent is embedded in the polymeric valve body, and wherein said
polymeric valve body encloses said base and includes a plurality of apertures in said polymeric
valve body corresponding to said apertures in said base.
4. (canceled)
5. (currently amended) The prosthetic heart valve of claim 2 3 wherein said stent
comprises a plurality of commissures in generally cylindrical configuration and said base is
connected to said commissures at an upstream location and said base slants radially outwardly

from said commissures.

NO.478 706

03/01/2004 12:39

- 6. (original) The prosthetic heart valve of claim 5 wherein a junction between said commissures and said base forms an angle of between 90° and 135°.
- 7. (currently amended) The prosthetic heart valve of claim 2 3 further comprising a sewing ring circumferentially surrounding the base.
- 8. (original) The prosthetic heart valve of claim 7 wherein said sewing ring is connected to said base at an upstream, inner side of said base.
- 9. (currently amended) The prosthetic heart valve of claim 2 3 wherein at least some of said apertures are slots.
- 10. (original) The prosthetic heart valve of claim 9 wherein at least one of said apertures is generally circular.
- 11. (currently amended) The prosthetic heart valve of claim  $\pm 3$  further comprising a sewing ring circumferentially surrounding the valve body and the stent and attached to the stent by sewing ring fasteners extended through said apertures in said stent.
- 12. (previously amended) The prosthetic heart valve of claim 11 wherein the sewing ring fasteners are sutures.

NO.478 007

03/01/2004 12:39

- 13. (currently amended) The prosthetic heart valve of claim ± 3 wherein said stent further comprises an upstream edge and a wire connected to said edge wherein the suture apertures are downstream from said wire.
- 14. (previously amended) The prosthetic heart valve of claim 13 further comprising a sewing ring circumferentially surrounding the valve body and the stent and attached to the stent by sewing ring fasteners extended through said apertures in said stent.
- 15. (previously amended) The prosthetic heart valve of claim 14 wherein the sewing ring fasteners are sutures.
- 16. (canceled)
- 17. (original) A prosthetic heart valve comprising:

a polymeric valve body having at least one leaflet, said leaflet having an open position and a closed position,

a stent molded within said valve body, said stent having a plurality of apertures, said apertures being exposed through said polymeric valve body.

18. (previously amended) The prosthetic heart valve of claim 17 wherein said stent comprises a circumferential base and wherein said apertures penetrate said base.

03/01/2004 12:39 NO.478 P08

19. (original) The prosthetic heart valve of claim 18 wherein said polymeric valve body encloses said base and includes a plurality of apertures in said polymeric valve body corresponding to said apertures in said base.

20. (canceled)

21. (original) The prosthetic heart valve of claim 18 wherein said stent comprises a plurality of commissures in generally cylindrical configuration and said base is connected to said commissures at an upstream location and said base slants radially outwardly from said

commissures.

22. (original) The prosthetic heart valve of claim 21 wherein a junction between said

commissures and said base forms an angle of between 90° and 135°.

23. (original) The prosthetic heart valve of claim 18 further comprising a sewing ring

circumferentially surrounding the valve body.

24. (original) The prosthetic heart valve of claim 23 wherein said sewing ring is connected to

said base at an upstream, inner side of said base.

25. (original) The prosthetic heart valve of claim 18 wherein at least some of said apertures are

slots.

NO.478 009

03/01/2004 12:39

26. (original) The prosthetic heart valve of claim 25 wherein at least one of said apertures is generally circular.

27. (original) The prosthetic heart valve of claim 17 further comprising a sewing ring circumferentially surrounding the valve body and the stent and attached to the stent by fasteners extended through said apertures in said stent.

28. (original) The prosthetic heart valve of claim 27 wherein the fasteners are sutures.

29. (currently amended) The prosthetic heart valve of claim 17 wherein said stent further comprises an upstream edge adjacent blood flowing into the valve and a wire connected to said upstream edge wherein the suture apertures are downstream from said wire.

30. (original) The prosthetic heart valve of claim 29 further comprising a sewing ring circumferentially surrounding the valve body and the stent and attached to the stent by fasteners extended through said apertures in said stent.

- 31. (original) The prosthetic heart valve of claim 30 wherein the fasteners are sutures.
- 32. (canceled)
- 33. (canceled)
